

Electrical panel for Precibalance dynamic balancing operations

The electrical panel in a precibalance dynamic balancing machines serves the purpose of start stop and brake functions of the motor of the Precibalance dynamic balancing machines.

Based on the economics , space availability , ergonomics many designs are available for the buyers to choose. Immaterial of the selection of the panel, the functions remain full with total safety and legal requirements complied with.

A stand alone 21 inch Euro rack design housing electrical switch gear, computer, key board , printer is shown in the design package EP - euro21.

The Panel door can be kept closed for production balancing, Since computer monitor the speed of the component and starts the measuring cycle once programmed balancing speed is reached.
